PROJECTS

Hospital Management System | Java, Spring Boot, MySQL, Gemini API

- Developed a full-stack web application to manage hospital operations: patient records, appointments, and staff details.
- Built RESTful APIs using Spring Boot for secure and scalable backend services.
- Integrated MySQL database for efficient data storage and retrieval.
- Integrated Gemini API to intelligently suggest suitable doctors during appointment booking based on user input.
- Designed responsive frontend using HTML, CSS, and JavaScript.

Post Office Counter Monitoring System | Java, Spring Boot, OpenCV, MySQL

- Developed a real-time monitoring solution to optimize post office counter operations by detecting crowd density using Computer Vision.
- Integrated OpenCV for image processing to analyze CCTV/camera feeds and calculate real-time footfall and queue lengths at service counters.
- Built a centralized Dashboard for administrators to visualize crowd data, enabling better resource allocation and staff management.
- Implemented Secure Access Control with dedicated modules for Admin and User roles using Spring Security (or Role-based logic).
- Developed Feedback & Inquiry modules to capture citizen sentiment and provide a direct contact channel for service improvements.
- Designed a responsive frontend using HTML, CSS, and JavaScript to display live statistics and system alerts across various devices.
- Engineered RESTful APIs with Spring Boot for seamless data flow between the OpenCV processing unit, MySQL database, and the user interface.
